Jet Fuel Wall Lamp

DESCRIPTION

The wall lamp was made on the basis of the original French airframe plug from the beginning of the 21st century. The element is made of anodised aluminum combined with stainless steel. On the front side, two nameplates in English and French are installed, informing about the safety and operating instructions. Moreover, manufacturer's signature and serial numbers are visible.

CONSTRUCTION

A classic bulb holder for the E 27 base was installed in the central element, which was originally the basis for safety locking of the filler cap. From the inside, the wall bracket was made of a steel profile covered with powder coating. Electrical installation based on certified materials.
