Bulb with E 27 base, maximum wattage 150 W.

OK 1/3 Fluorescent Luminaire

DESCRIPTION OF THE RENOVATION

The offered lamp has undergone a comprehensive renovation: sanding of steel elements, application of a very durable powder coating (premium line RAL 1036 iron base, RAL 7016 structure, steel mesh with protection – new galvanic coating – galvanised), replacing all screws, nuts, a new electrical installation using certified materials.

Bulb holder – thread E 27, maximum wattage of the bulb: 150 W. It is possible to sand and polish the lamp body to a high gloss with clear lacquer in gloss or mat, as well as to individually select the color of the lamp based on the RAL color palette both in powder coating and the spray pattern. Optional spray varnish upon request: mat, semi-gloss or gloss.

Ordering a non-standard color or colors of the individual components of the lamp is associated with a prolonged waiting time for the product and individual pricing. The vintage version retains the original patina of age (lacquer, rust, scratches, discoloration and other traces of use), with new electrical installation based on certified materials.
