Bulb with E 27 base, maximum wattage of 200 W.

OS-200 P Lamp

DESCRIPTION OF THE RENOVATION

The offered lamp has undergone a comprehensive renovation: sanding of steel elements, applying a very durable powder coating (RAL 1036 premium line, ring fixing the protective mesh RAL 7016, protective mesh covered with a new galvanic coating – galvanised), all screws, nuts, washers are new, a new electrical installation installed, based on certified materials.

It is possible to sand and polish the lamp body to a high gloss with clear lacquer in gloss or mat, as well as to individually select the colour of the lamp based on the RAL colour palette both in powder coating and the spray pattern. Optional spray varnish on request: mat, semi-gloss or gloss.

Ordering a non-standard colour or colours of the individual components of the lamp is associated with a prolonged waiting time for the product and individual pricing. The vintage version is a form that retains the original patina of age (lacquer, rust, scratches, discolouration and other traces of use), a new electrical installed, based on certified materials.
