

# Radio Wave Lamp

**Price:**

**Dimensions:**

Base: 15.5 cm wide

Depth: 12.5 cm

Total height: 58 cm

Weight: 17 kg

Power cord length: 2.5 m  
braided cable, classic plug

## DESCRIPTION

The standing lamp was created on the basis of the original military radio station from the 1960s, which was an equipment for the German army Bundeswehr. The SEA 25 model was originally intended for use in combat and other military vehicles.

Frequency range 26.0 – 69.95 MHz, power supply: 24 V.

## CONSTRUCTION

The batteries and the internal installation of the radio station were dismantled. The remaining parts are: the coding mechanism, frequency indicator, knobs and switches. Inside the case, there is a dimmer module installed and it is operated using the original knob on the main panel.

Two diodes in red and blue combined with a dimmer. On the upper part of the radio station, there is a factory lamp mounted, model C-150, which has been restored and covered with powder varnish (for a detailed description and specification of the lamp – see lamp C-150).

Electrical installation made using certified materials.
