

Westland Sea King Shelves

Price of presented set:
Price of author's kit: for individual valuation

Dimensions of the blade:
Total length: 121.5 cm
Width: 19 cm
Shelf spacing: 33 cm
Spacing of mounting holes: 39.5 cm
Total weight: 9.5 kg

For individual orders we will make any number of shelves in any span welded in one frame. The colour of the frame can be chosen from a RAL palette of powder coatings or traditional varnishes.

DESCRIPTION

A set of two shelves made of the original rear rotor blades from a British helicopter Westland Sea King. The blades, powered by powerful Rolls Royce Gnome engines, after serving at RAF for a while, were discharged and finally ended up at the "Upstream Factory" workshop. Years of production: 1980-90.

CHARACTERISTICS / CONSTRUCTION

Material: aerial aluminum, original green varnish with a red stripe, manufacturer's signature, embossed serial numbers, military service documentation included.
There are air travel marks on the surface.

The construction of the shelf: steel frame, closed profile with a cross section of 10 x 5 cm. Powder coated (premium line), blades mounted in profiled beds with screws.
