

Factory Clock TN Tele Norma Germany

Price:

Dimensions:

Diameter: 30.5 cm

Depth: 7 cm

DESCRIPTION

The original factory clock of the German company TN Tele Norma produced in the 1960s.

Originally, it served as the so-called secondary clock (slave clock) not having its own independent mechanism to measure time - the controlling was done by a master clock, which simultaneously operated several receivers and provided the same time indication on each one.

CONSTRUCTION

The casing is made of pressed steel sheet covered with varnish, in the upper part there is a hinge fixing the chrome frame with glass protecting the hands and the aluminum face.

RANGE OF RENOVATION

The clock has been thoroughly cleaned, preserving the original varnish and the patina of time, an electric mechanism controlling the time indicated on the modern battery powered werk (modern quartz movement with a battery).
